Technical Skills

Programming Languages
JavaScript, TypeScript, Python,
C++, C, Kotlin

Frontend Development
React.js, Next.js, Tailwind CSS,
Zustand, Framer Motion

Backend & APIs
Node.js, Express.js, Prisma
ORM, Zod, JWT, REST APIs

Databases
PostgreSQL, MySQL

Tools & Version Control
Git, GitHub

Design
Figma, Adobe Illustrator,
Adobe Photoshop

Certifications

Cambridge Certificate in
Advanced English (CAE) – Level
C1
2022

Languages

Romanian
Native Speaker

English
C1 (CAE)

Awards

6th Place out of 50 (Honorable
Mention), ZebraHack 2.0
14 December 2024

Competed in a 4-person
team, taking ownership of the
front-end development.

Summary

Third-year Applied Informatics student specializing in full-stack web development, with hands-on experience in React, Next.js, Node.js and PostgreSQL. I enjoy building products from scratch — from database schema to UI. Looking for a junior role or internship where I can contribute to real production systems.

Education

National University of Science and Technology POLITEHNICA Bucharest
Bachelor's Degree
Faculty of Automatic Control and Computers
October 2023 - Present

Experience

Soft Net Consulting
Internship
Bucharest
June 2025 - August 2025

- Designed and maintained MySQL database schemas containing 10+ relational tables, focusing on strict data integrity and proper constraints.
- Sped up slow-running SQL queries by implementing basic indexing strategies, cutting down data retrieval times by roughly 30% to support future scalability.

Projects

[Cloud Split Dashboard - Git Good Hackathon](#)
May 2026

- Built a carbon-aware compute routing simulator for a Sustainability & GreenOps hackathon using Vanilla JavaScript, HTML5, and CSS3 without external frameworks.
- Implemented a K-means-style clustering algorithm to optimize server distribution based on geographic proximity, local carbon intensity, and power usage effectiveness (PUE).
- Engineered a real-time data visualization engine via inline SVG to simulate load distribution across 200+ users and compute metrics like P99 latency and CO₂ reduction.

[PeerTutor](#)
April 2026

- Developed a real-time collaborative academic workspace using React (Vite), Tailwind CSS, and TanStack Query for efficient state management and caching.
- Architected a backend with Supabase, leveraging PostgreSQL, Row Level Security (RLS), and WebSockets to handle live chat and state synchronization.
- Integrated Monaco Editor to provide a professional-grade, synchronized coding and writing environment without requiring page refreshes.

[RPG Habit Tracker](#)
March 2026

- Built a full-stack habit tracker using Next.js for the frontend and a Node.js/Express API, connected to a PostgreSQL database via Prisma ORM.
- Handled cross-domain authentication with JWT and httpOnly cookies, using Zustand to manage state and fix session rehydration issues on mobile browsers.
- Secured API routes by adding Zod for data validation, setting up strict CORS rules, and applying rate limiting to prevent spam requests.

Volunteering

Liga Studenților din Facultatea de Automatică și Calculatoare (LSAC)
October 2023 - Present

- Led the design team for "Ce spun Automatistii?", managing event branding and materials for 200+ participants.
